

ELTECHS

The List of Unofficially supported games for ExaGear Strategies

The games below have been tested by our ExaGear Strategies app users and hasn't been approved by our tech support team yet. Still, you can try all of them on your own and send us your feedback. The list currently consists of 143 games and keeps on growing. Stay in touch with us to get the latest updates of the official games list.

Also note, that some of these games will require additional modifications and controller setup. In case you see the blank section, it means that this particular type of modification isn't required. There are games that don't require any extra affairs at all!

All the extra modifications are explained below ([after this list](#)).

App Version	Game	What to do to make a game work?					
		Choose the control	Rename the EXE file	Set the display resolution	Set the color depth	Set the locale	Comments
	101: The Airborne Invasion of Normandy

19	Strategies	2.1.6	Command & Conquer: Red Alert - The Aftermath					

Column “Choose Controls”. Setup the appointed type of controls for a game from the run config menu. In case it’s blank, you can choose any.

Column “Rename the EXE file”. If an exe file, like "Heroes3.exe", "discipl2.exe" etc. is listed here, you will need to rename your games exe file(s) to match.

- Locate the game data folder, make a copy of the exe file and rename it.
- Renaming unsupported exe names can make unsupported games launch with ExaGear Strategies. They will also show up in the supported game list.
- In case it’s blank, there’s NO NEED to change

Columns “Set the display resolution” & “Set the color depth”. You can change the default Resolution and Color Depth from the run config menu. From the app’s main menu click the “3 dots” icon by the exe name and set default values for your games. Lower Resolution and Color Depth settings are recommended for better performance. In case it’s blank, you can go on with the default settings.

Column “Set the locale”. This is the Language Encoding. The default option is usually the best but some games may require that you change it if listed. All the

changes are performed within the config menu.

Column “Comments”. If you see a comment that says "dsound.dll 2.0.4", then download this dll file [here](#) or [here](#) and place it into your game folder. Using this older dsound.dll can fix game launching and sound issues.
